

Comparing Numbers Game (<, >, =)

A**B****C****D**

1	21 __ 2	3 __ 1	10 __ 5	27 ÷ 9 __ 3
----------	----------------	---------------	----------------	--------------------

2	9 x 6 __ 50	6 x 2 __ 18	8 __ 5	3 x 2 __ 6
----------	--------------------	--------------------	---------------	-------------------

3	120 __ 100	1,000 __ 30	15 __ 9,000	1 __ 17
----------	-------------------	--------------------	--------------------	----------------

4	77 __ 11	18 __ 9,000	21 + 7 __ 29	30 __ 30
----------	-----------------	--------------------	---------------------	-----------------

HOW TO PLAY

1. This game is excellent for the classroom. Split the teams into 2 or more and draw grids on the board to represent them. Let students fill in the signs in the spaces provided.
2. For low levels of students simply ask them to say the answer in the coordinates you say. For example if the answer in the coordinate A1 was $>$ (meaning greater than), you say A1 and within 1 second the student or group which says $>$ wins a point. If they are really slow increase the time to 2 seconds or more.
3. To give students more practice, let them take turns telling the coordinates of the problems for others to quickly say the problem and correct sign.
